Acres Treated by Method: Statewide; FY2022-FY2026

Acres treated by method, FY2022 to FY2026
Thousand acres; the total is in the table

Key finding: prescribed fire grew 2.5 times, from 9.4 to 23.5 thousand acres, and passed mechanical thinning in FY2025. It is 40% of FY2026 acres.
Note: Fiscal years run July to June. Hand thinning includes pile burning. An acre treated twice in one year counts twice.

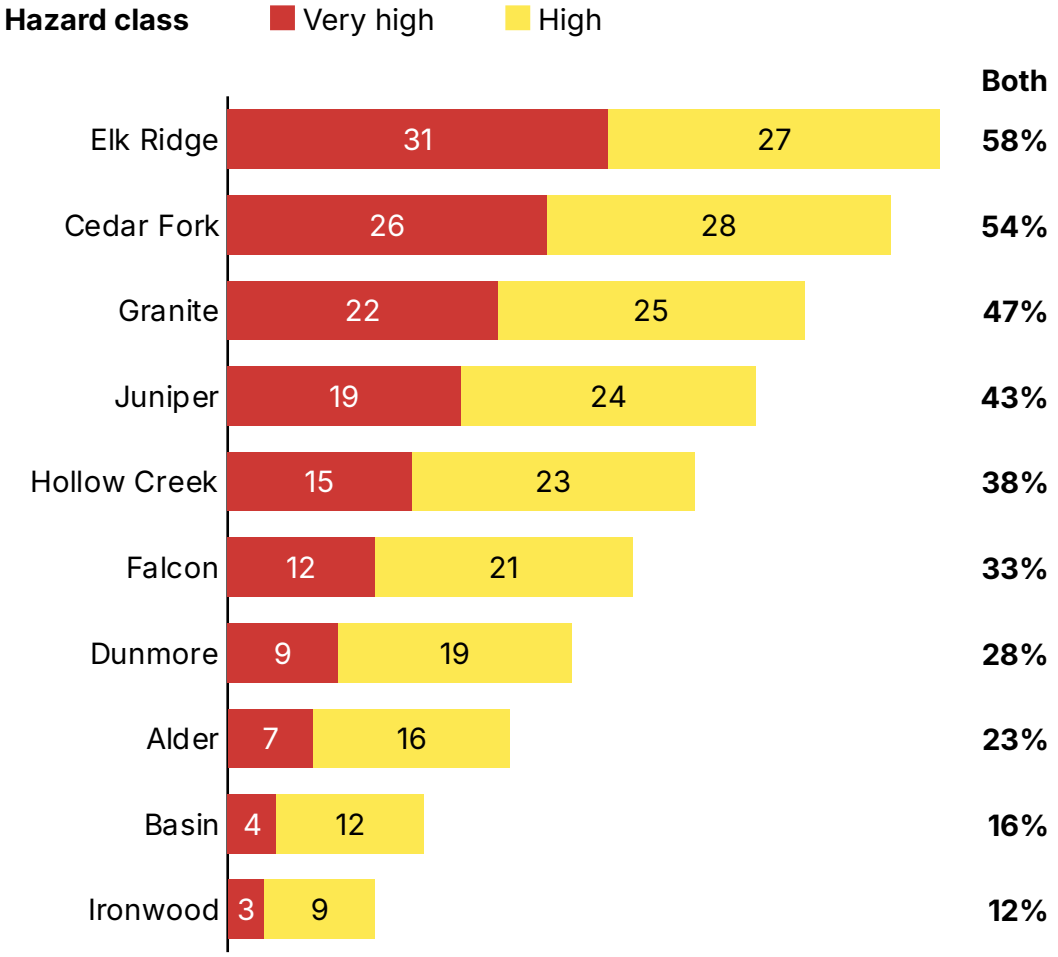

Method	FY2022	FY2023	FY2024	FY2025	FY2026	Change		Rank
All methods	**35.7**	**41.9**	**48.2**	**53.7**	**59.0**	**+65%**		
Prescribed fire	9.4	12.6	16.1	19.8	23.5	**+150%**	↑	**Rose to 1st**
Mechanical thinning	14.1	15.8	17.2	18.0	18.9	**+34%**	↓	**Fell to 2nd**
Mastication	8.2	8.9	9.6	10.1	10.4	**+27%**	→	**Held 3rd**
Hand thinning	4.0	4.6	5.3	5.8	6.2	**+55%**	→	**Held 4th**

Hazard and Planned Acres by County; FY2027-FY2029

Share of county land in wildfire hazard, by hazard class
Percent of county land; counties ranked by the two classes together

Homes in the wildland-urban interface (WUI) and acres planned
Thousands, FY2027-FY2029; shares of the ten-county total

County	WUI Homes	Home Share	Planned Acres	Acre Share
Elk Ridge	18.4	12%	32.0	20%
Cedar Fork	22.1	15%	29.5	18%
Granite	9.8	6%	21.0	13%
Juniper	6.2	4%	16.5	10%
Hollow Creek	14.7	10%	17.5	11%
Falcon	11.3	7%	13.0	8%
Dunmore	**25.6**	**17%**	**12.5**	**8%**
Alder	8.9	6%	8.0	5%
Basin	**30.2**	**20%**	**6.0**	**4%**
Ironwood	4.1	3%	4.0	2%
All counties	**151.3**	**100%**	**160.0**	**100%**

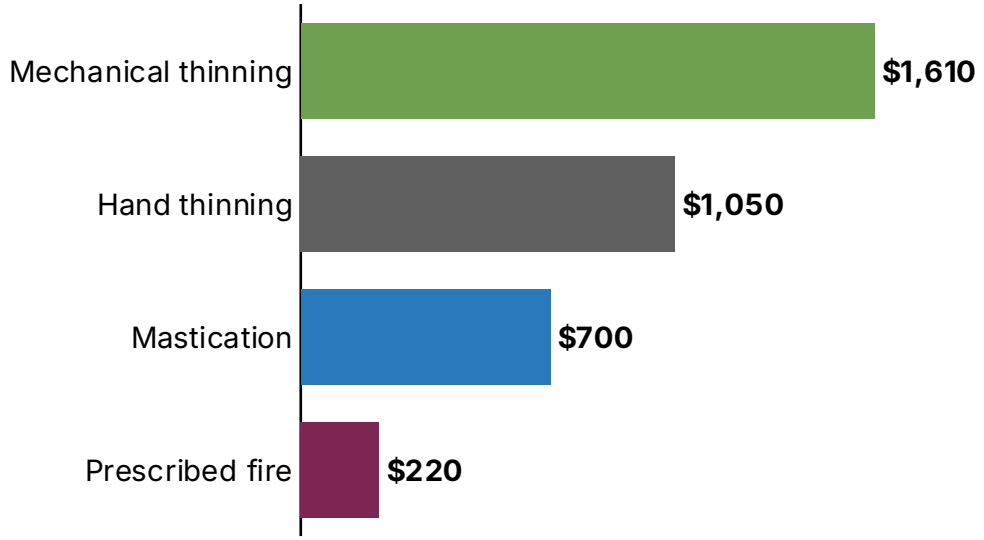

Key finding: Basin and Dunmore hold 37% of the homes in the WUI but receive 12% of planned acres; near homes the plan thins by hand, at 4.8 times the cost per acre of prescribed fire.
Note: Hazard classes are from the program's 2026 fuels model. Bold rows: the two counties with the most WUI homes.

Cost per Acre by Treatment Method: Statewide; FY2026

Cost per acre treated, by method and by cost component
FY2026 dollars per acre; bar colours as the methods on page 1

	Labor	Equipment	Materials	Planning
Mechanical thinning	$610	**$760**	$150	$90
Hand thinning	**$820**	$90	$60	$80
Mastication	$180	$390	$70	$60
Prescribed fire	$95	$40	$25	$60

Key finding: prescribed fire is 40% of planned acres but 11% of cost; mechanical thinning is 28% of acres and 55% of cost, at 7.3 times the cost per acre, most of it equipment.

Note: Plan cost is planned acres FY2027-FY2029 times FY2026 cost per acre. Bold component: the largest part of the two dearest methods. Hand thinning includes pile burning.

The plan's cost by method, FY2027-FY2029
Thousand acres; dollars per acre; $ million; percent of the plan

Method	Planned Acres	Unit Cost	Plan Cost	Acre Share	Cost Share
Mechanical thinning	44.0	1,610	70.8	**28%**	**55%**
Hand thinning	24.0	1,050	25.2	15%	19%
Mastication	28.0	700	19.6	18%	15%
Prescribed fire	64.0	220	14.1	**40%**	**11%**
All methods	**160.0**	**811**	**129.7**	**100%**	**100%**

Crews and Equipment: Statewide; FY2027-FY2029

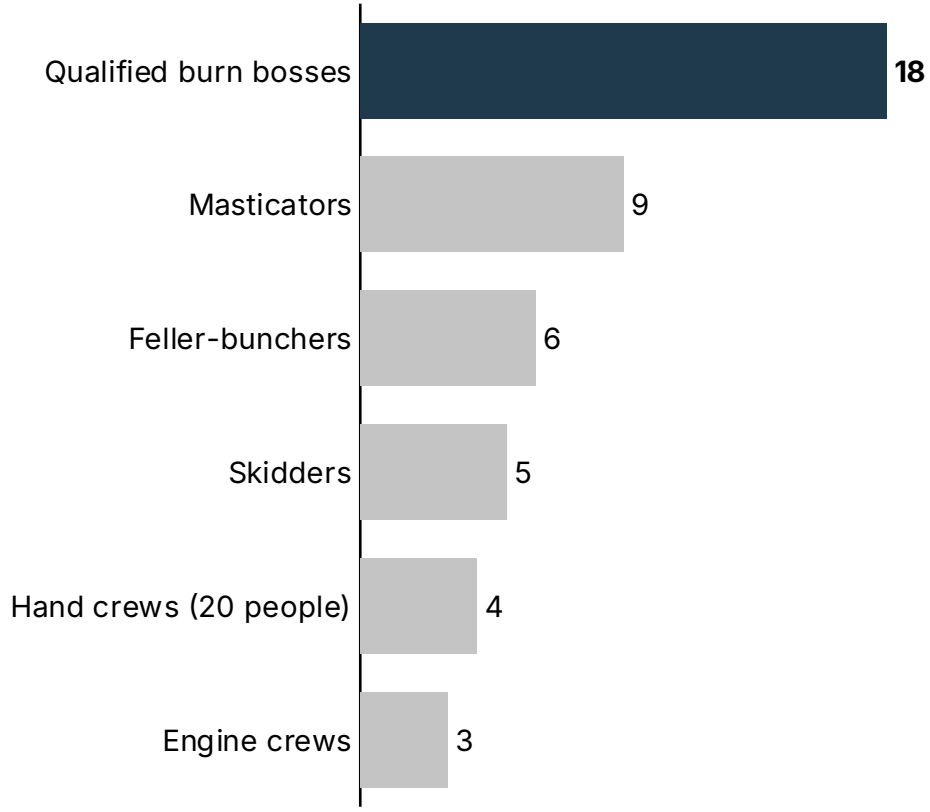

Crews and heavy equipment in service and needed
Count of crews or machines

Resource	In Service FY2026	Peak Need FY2028	Gap	Increase
Hand crews (20 people)	14	22	+8	+57%
Engine crews	26	30	+4	+15%
Qualified burn bosses	**9**	**16**	**+7**	**+78%**
Masticators	11	15	+4	+36%
Feller-bunchers	6	9	+3	+50%
Skidders	8	11	+3	+38%

Crew-days needed and available, by fiscal year
Crew-days; navy is the plan's need, grey what crews can supply

Lead time to add one unit
Months, longest first

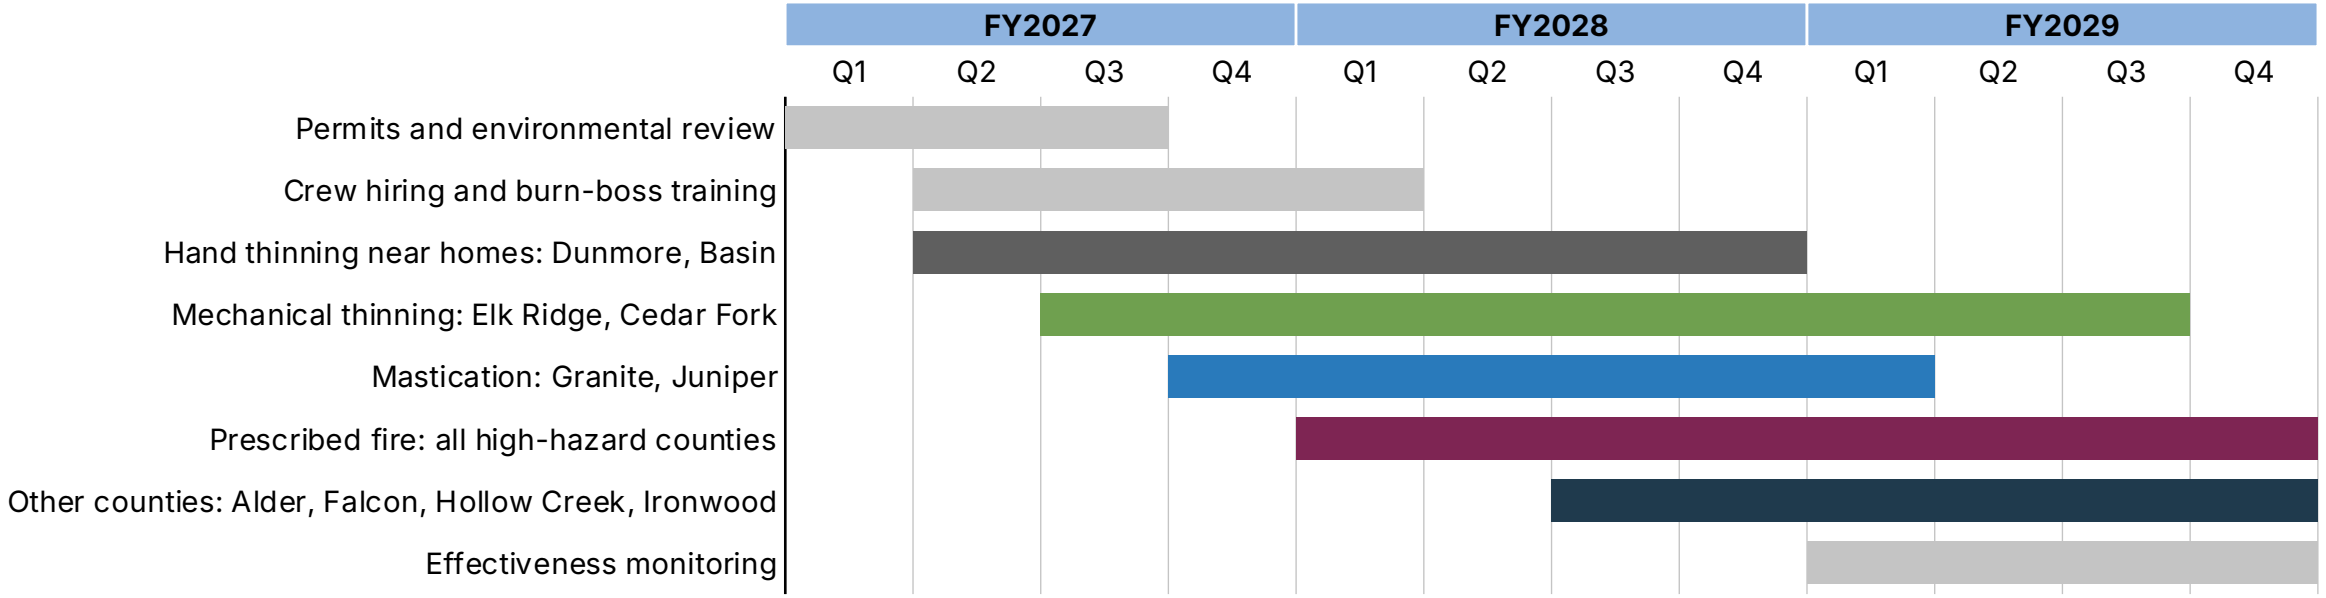

Key finding: capacity is 900 crew-days short in FY2027 and 1,500 at the FY2028 peak. Burn bosses are the tightest constraint: the plan needs 16, up 78% from 9, and each takes 18 months to qualify.
Note: A crew-day is one crew working one day on treatment; engine crews count only days not held for fire response.

Treatment Schedule by Work Stream: FY2027-FY2029

Work schedule by fiscal quarter, FY2027 to FY2029
July 2026 to June 2029; each bar runs from the first to the last quarter of work

Planned acres by year
Thousand acres

Method	FY2027	FY2028	FY2029	Total
Prescribed fire	16.0	22.0	26.0	64.0
Mechanical thinning	12.0	17.0	15.0	44.0
Mastication	8.0	11.0	9.0	28.0
Hand thinning	6.0	9.0	9.0	24.0
All methods	**42.0**	**59.0**	**59.0**	**160.0**

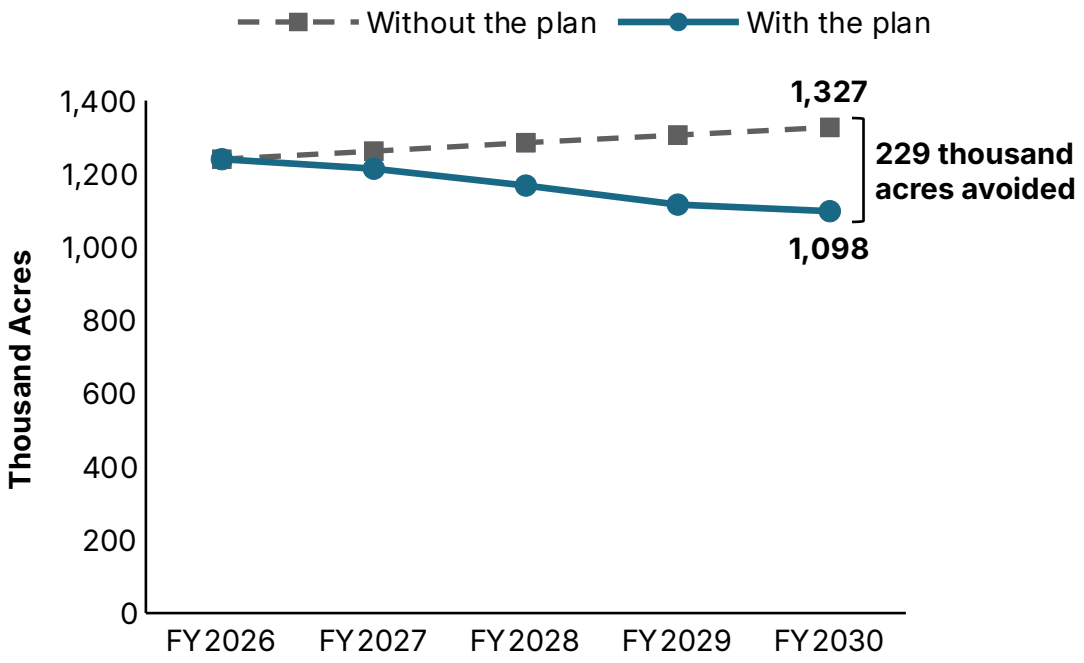

Key finding: mechanical thinning in Elk Ridge and Cedar Fork runs nine of the twelve quarters, Q3 of FY2027 to Q3 of FY2029. FY2027 treats 42.0 thousand acres while permits clear, then 59.0 a year, the FY2026 pace.
Note: Quarter 1 is July to September. Bar colours: the method colours of page 1; grey, preparation and monitoring; navy, the four smaller counties, which use all four methods.

Hazard Reduction Expected: Statewide; FY2026-FY2030

Statewide land in high or very high hazard
Thousand acres; without the plan, fuels keep growing about 1.7% a year

Path	FY2026	FY2027	FY2028	FY2029	FY2030
Without the plan	1,240	1,262	1,285	1,306	1,327
With the plan	1,240	1,214	1,168	1,116	1,098
Acres avoided	**0**	**48**	**117**	**190**	**229**

Share of county land in high or very high hazard
Percent of county land; counties in the order of page 2

Key finding: by FY2030 the plan holds high-hazard land to 1,098 thousand acres, 229 thousand (17.3%) below the path without treatment and 11.5% below today. Every county falls, by 3 to 21 points; none stays above 37%.
